DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to washing machine process, classified in class 8, subclass 158.
- II. Claim 9-11, drawn to a washing machine, classified in class 68, subclass 12.01.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as apparatus and process for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the washing machine of Group II can be used without requiring the process of Group I, necessitating a microcomputer for sensing an amount of laundry based on at least an integration value derived from the voltage signal output from a pulse sensor; rather, the washing machine of Group II can be used for perform sensing an amount of laundry based on a sensed user input exclusive of any derivations of integration values. In addition, the search for Groups I and II would be different, as well as, issues involving the examining process among said method and apparatus claims.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Song Jung on June 30, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.
